

# Vulnerability Assessment & Penetration Testing (VAPT)

Driving vulnerability management and pen-testing to the next level.

## Did you know?

*Unpatched vulnerabilities were involved in more than 60% of data breaches till now!*

Identify potential network security threats and risks across your organization's IT infrastructure with our pen-testing and **vulnerability management service**. Leverage best-of-breed technology and expertise to help anticipate and prevent attacks while improving compliance. Our VAPT testing experts and ethical hackers boast of a proven experience and industry expertise in defining critical risk areas, analyzing scan results with data-driven context, customizing threat reports for improved visibility and remediation steps.

Our **threat vulnerability assessment** services offer comprehensive vulnerability scanning and reporting, unified threat assessment, internal/external pen-testing (Black Box, White Box, Gray Box) to detect unknown exploits in your networks, servers, databases, devices, web applications or other digital assets – both on on-premise as well as cloud.

## Futurism Vulnerability Management Service

Our **VAPT testing** services are aimed to help you identify and prioritize weaknesses and provide effective remediation steps.

## Vulnerability Assessment

Futurism offers industry's most sophisticated **vulnerability management service** to help you detect as well as protect attacks anytime and anywhere on a continuous basis.

- Comprehensive coverage and visibility of all your IT infrastructure
  - Deep vulnerability assessment services for network infrastructure, apps, servers, devices, etc.
  - Eliminate false positives
  - Scalable and extensible vulnerability management service
  - Discover forgotten devices
  - Prioritize remediation
  - Schedule or manual scanning of vulnerabilities
  - Zero-day risk analysis
  - Intelligent threat reports
  - Reduced VAPT testing cost
  - Automated vulnerability-patch assessment
- **Penetration Testing**

Our **vulnerability assessment and penetration testing services** help to safely exploit vulnerabilities and threats in your IT network. Our testers use real-world attack scenarios when it comes to **VAPT testing**.

- Network pen-testing – internal and external
- Remote exploitation services
- Web application pen-testing services
- Mobile app pen-testing services
- IoT device pen-testing services
- Social engineering pen-testing services
- API pen-testing services
- Real-world attack simulation
- Wireless network pen-testing services
- Black box, gray box and white box testing
- Reveal vulnerabilities in real-time
- Business continuity and zero downtime
- Intelligent threat reports
- Compliance
